

Don't Cover Up Bad Smells—Eliminate Them with Our Odor Elimination Technology!

If your home has been flooded and you're dealing with mold and unpleasant smells, or there's some other foul odor that you just can't pinpoint, you're probably frustrated—and understandably so. There are many different sources of bad smells, from mold and mildew to pet urine to smoke and leftover food smells, but getting rid of the stink can prove challenging.

Too often, homeowners resort to covering up smells with air fresheners, but if you really want your home to smell better, you must get to the source. At WCP Facility Solutions, we are introducing our Healthy Home Management System which includes healthy solutions for keeping surfaces and air healthy and safe for homes. Healthy and safe air includes eliminating odors. It also helps to eliminate irritants in the air that cause allergies and asthma. We have recently started using chlorine dioxide to tackle odor removal. Chlorine dioxide (CL02) destroys odor at its core by getting rid of the particles (in air and on solid surfaces) that cause the odor in the first place.

So, how exactly does it work?

Chlorine dioxide in vapor form seeks out organic odor molecules and neutralizes them. We use a proprietary system that releases gas in the area to be de-odorized, then we close the area and leave. The CLO2 containers release a gas that spreads through all open areas and has a very short life span. This gas has a chemical electrical charge that is opposite of the charge of odor molecules. The two are attracted to one another, and once connected, both are destroyed.

Within a few hours, the molecules dissolve odor molecules or disintegrate. The product leaves behind a very small amount of harmless, biodegradable residue (sodium chloride, or table salt, and water) that is not harmful to pets or people.

In addition to working effectively on eliminating odors, chlorine dioxide eradicates mold after floods, disinfects cold and flu viruses, and destroys pathogens from diseases like Anthrax and MRSA, Flu and much more. Please contact us at 480-861-1427 or ken@wcpfsolutions.com for further information about how we can improve the health of your home or business.
